1. What is Contribution Protocol (CP) ?

Contribution Protocol (CP) is a regional governance infrastructure designed to record and circulate “important activities that do not generate monetary value.”

For example, it helps communities better support activities such as neighborhood associations and educational support for children — activities that are socially necessary but often invisible, and whose burdens tend to concentrate on a small number of people.

2. Difference from Volunteer Point Systems

Volunteer point systems are top-down models in which the operating organization grants points to participants.

In contrast, CP is a peer-to-peer (P2P) system in which local participants themselves take the initiative to record contribution activities and circulate value. In this structure, contributions are connected directly without a central distributor.

What is considered a valuable contribution is continuously defined and updated by local organizations through ongoing PDCA cycles.

Tokens issued within CP also serve as proof that a person actually took action for someone else.

3. Features of CP

- Tokens expire over time, helping prevent accumulation and inflation.
- Records of “who supported whom and how” remain preserved.
- CP can be introduced starting from small local communities and organizations.

4. Current Initiatives

CP is currently being implemented and tested on a small scale in areas such as food support, agriculture, education, local community activities, and CRM-based record management.

5. What CP Aims For

“Local governance that supports nameless contributions.”

— That is Contribution Protocol.

CP is a new social and regional economic framework that does not depend solely on money or competition.

Overview of the P2P Contribution Protocol

1. Contribution Protocol (CP) とは、

「お金にならない大切な活動」を記録し、循環できるようにする地域運営インフラです。例えば、町内会活動や子どもへの教育支援など、社会に必要なのに見えにくく、続ける人に負担が集中しやすい活動を、地域の中で支えやすくします。

2. ボランティアポイントとの違い

ボランティアポイントは運営側がポイントを付与するトップダウン型です。CPは、地域の参加者同士が主体となり、貢献行動を記録して価値を循環させるP2P型（中央の配布者を介さず、貢献が直接繋がる）の仕組みです。何を価値ある貢献とみなすかは、地域の組織がPDCAを通じて継続的に定義・更新します。CPにおいて発行されるトークンは、その人が誰かのために実際に行動した存在証明でもあります。

3. CPの特徴

- トークンは時間で失効し、蓄積・インフレを抑えます
- 「誰が何を支えたか」という記録は残り続けます
- 小規模な地域・団体から始められます

4. 現在の取り組み

CPは現在、食支援、農業、教育、地域活動、CRMによる記録管理などで、小規模な実装・検証が進められています。

5. CPが目指すもの

「名もなき貢献を支える地域運営」
——それがContribution Protocolです。

CPは、お金や競争に依存しない、新しい地域経済（社会）の仕組みです。
